#83 Restricted Tower of Hanoi

NickWarm

a.k.a

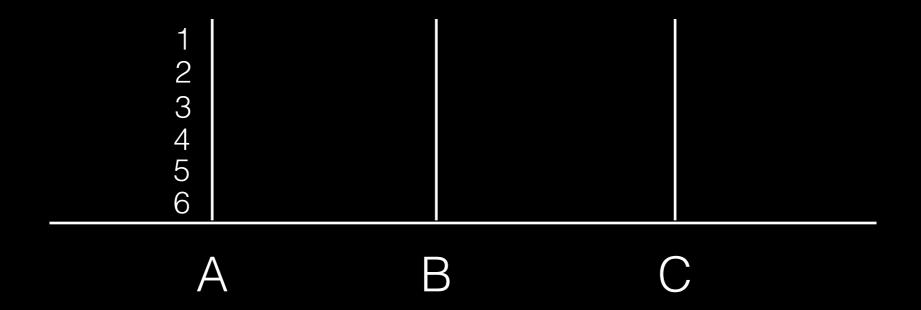

WG

原始的河內塔

目標:把碟子移動到C

簡化問題

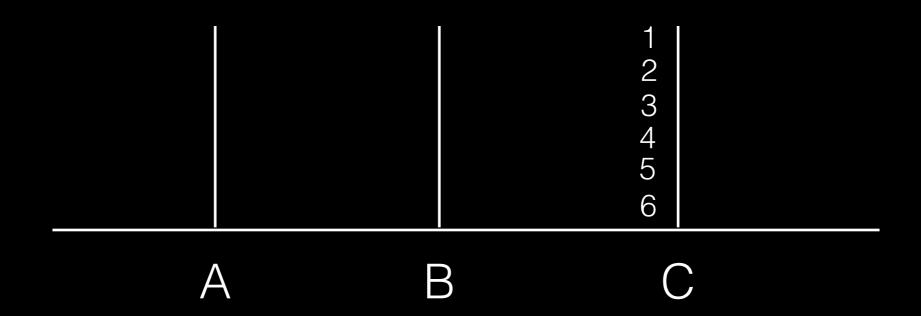

用數字來代表盤子大小 n = 6

條件

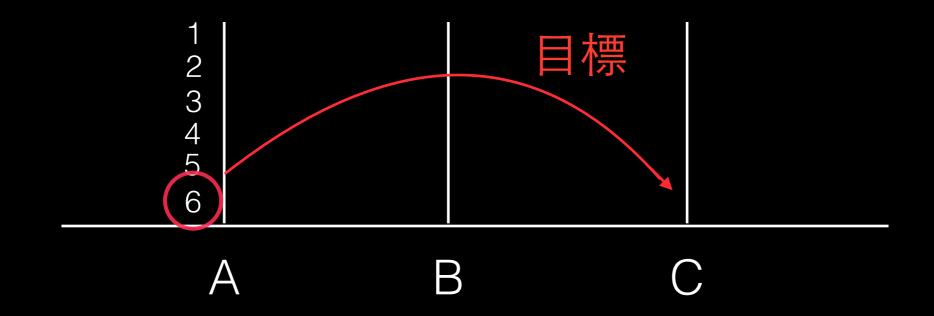

- 一次移動一個碟子
- 大的碟子不能疊在小的上面

期待的結果

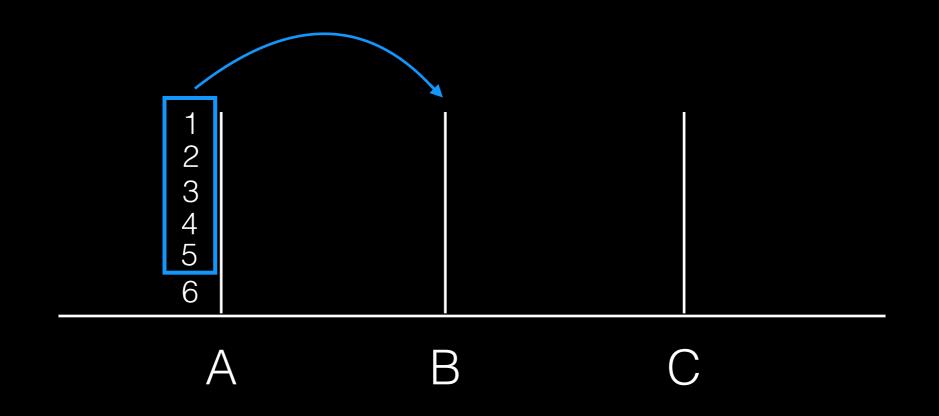

n = 6

目標:最大的碟子,要先放在柱子C

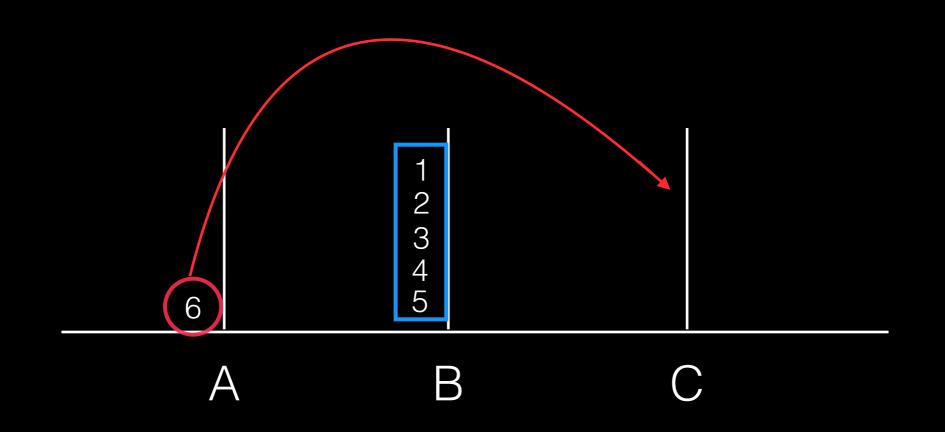

所以:上面的碟子,要先放在柱子B

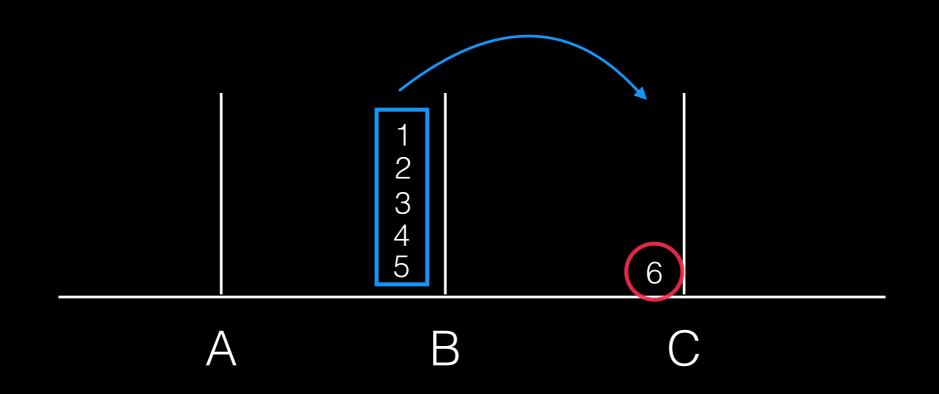

先把n-1個碟子從A放到B n = 6

然後:最大的碟子,就能放在柱子C

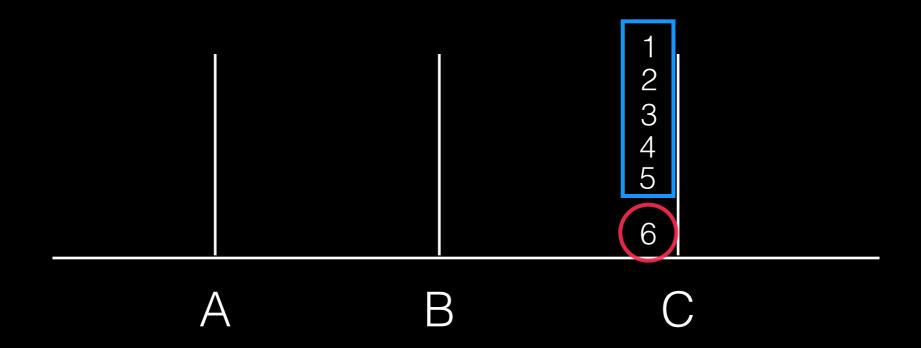

把1個碟子從A放到C n = 6

最後:把剩下的碟子放到柱子C

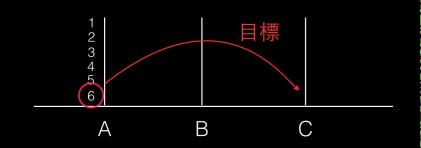

先把n-1個碟子從B放到C n = 6

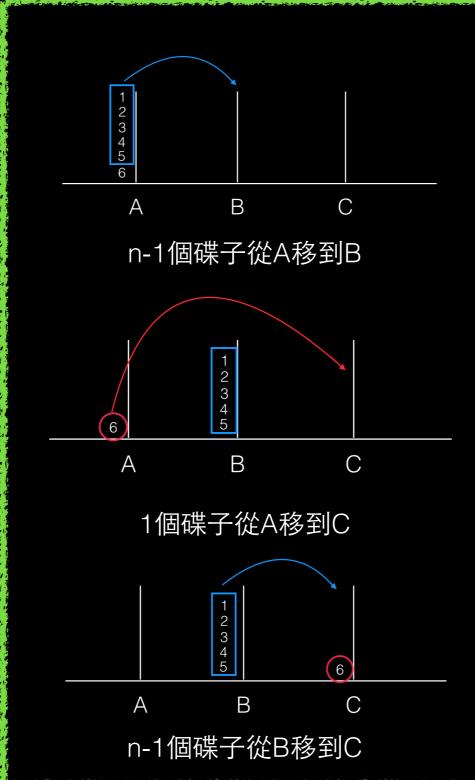

完成

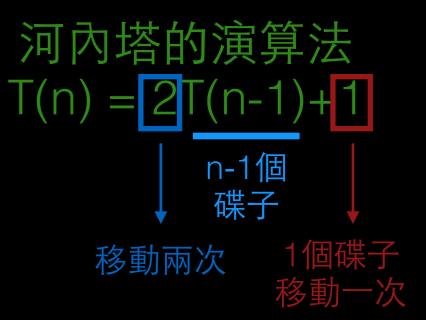

$$n = 6$$

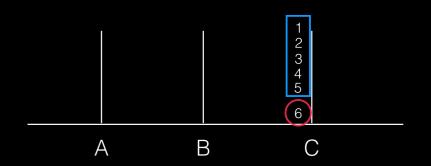

整個流程

就會變得非常直覺

程式碼

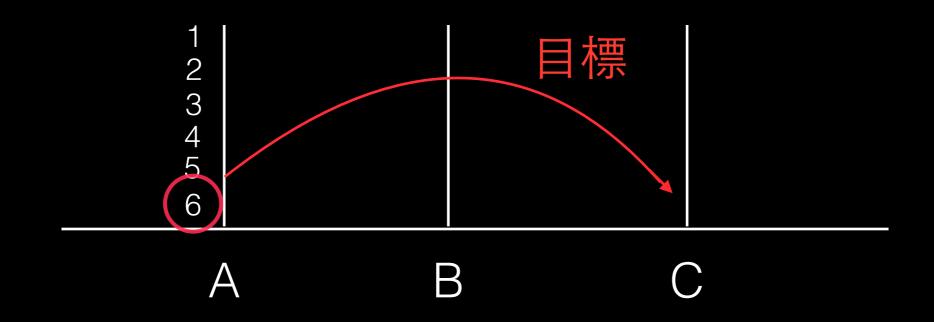

demo

#83 Restricted Tower of Hanoi

條件

- 一次移動一個碟子
- 大的碟子不能疊在小的上面
- 一定要通過中間的柱子B

目標:最大的碟子,要先放在柱子C

依照相同的概念

BUT !!!

條件

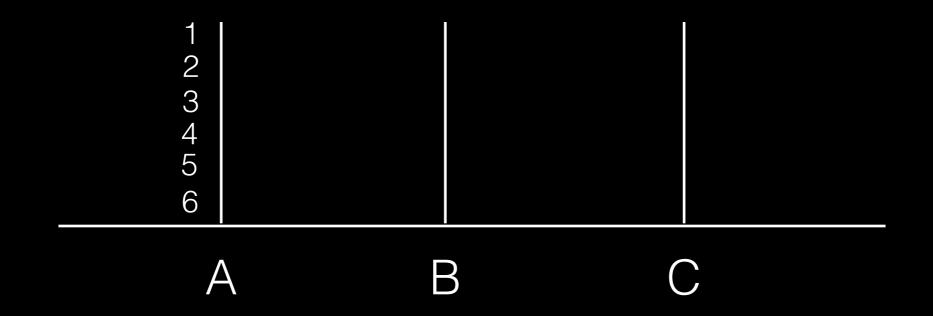

- 一次移動一個碟子
- 大的碟子不能疊在小的上面
- 一定要通過中間的柱子B

SO,

最大的碟子要先到達B柱子

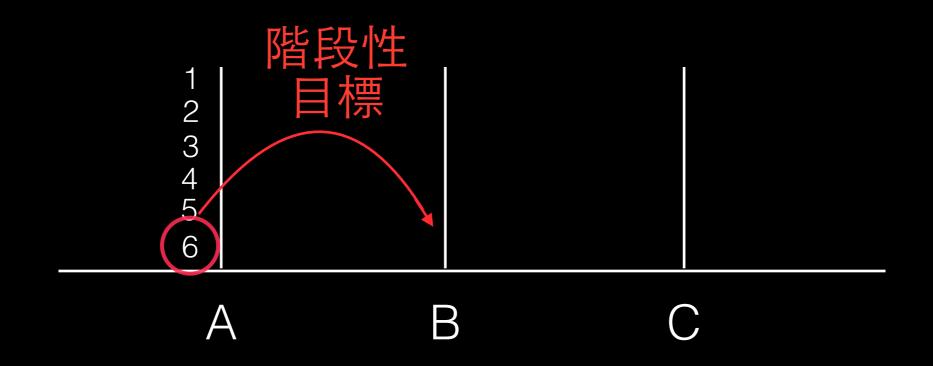

然後才能到達C柱子

目標:把最大的碟子移到C柱

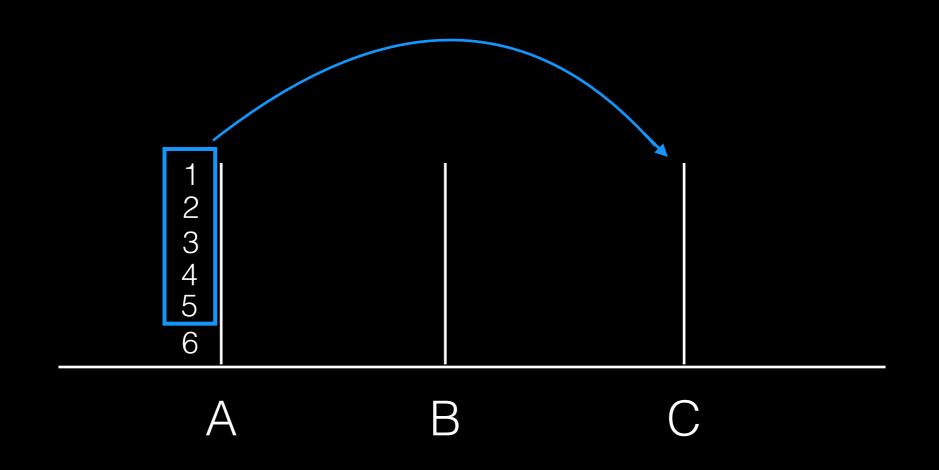

依照相同的概念

階段性目標:最大的碟子,要先放在柱子B

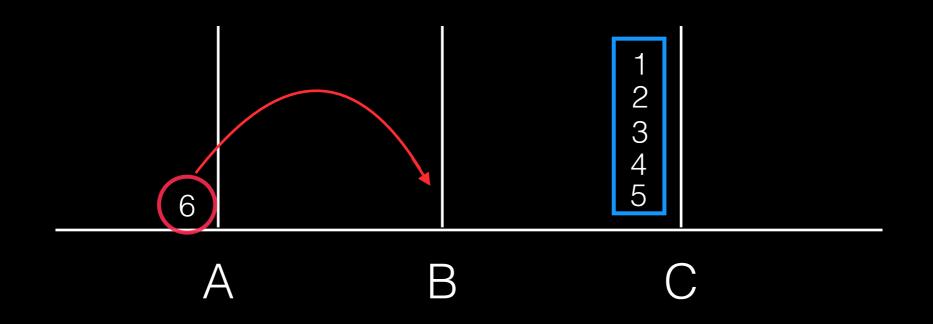

所以:上面的碟子,要先放在柱子C

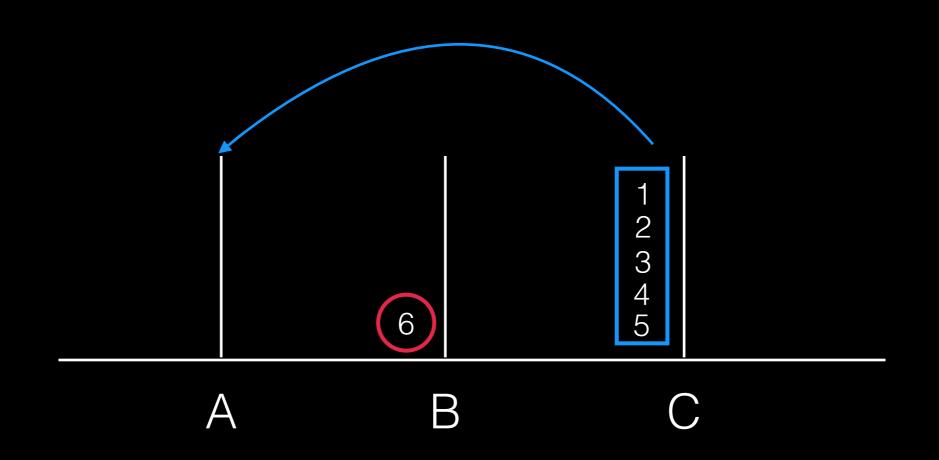

先把n-1個碟子從A放到C n = 6

接著:把最大的碟子放在柱子B

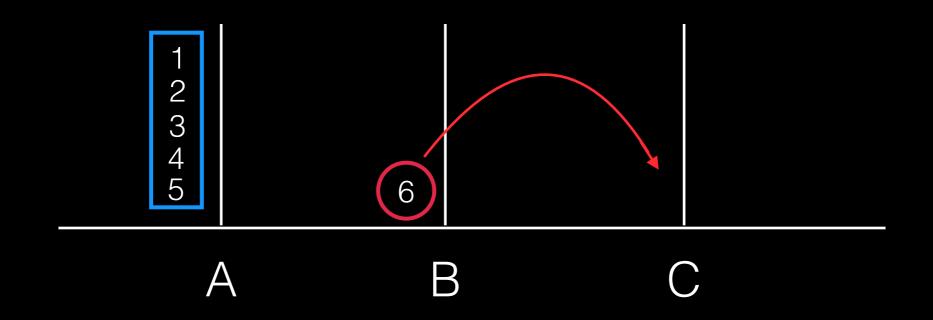

先把1個碟子從A放到B n = 6

接著: 把上面的碟子,從柱子C放到柱子B

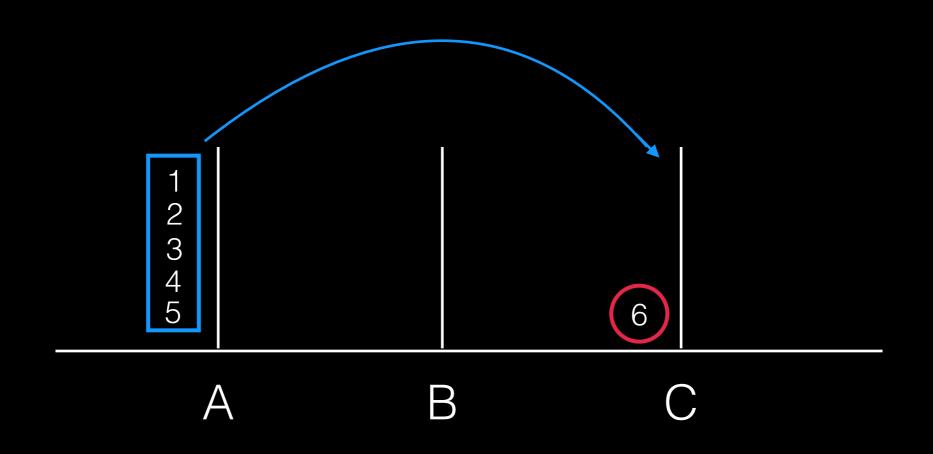

把n-1個碟子從C放到A n = 6

接著: 把最大的碟子,從柱子B放到柱子C

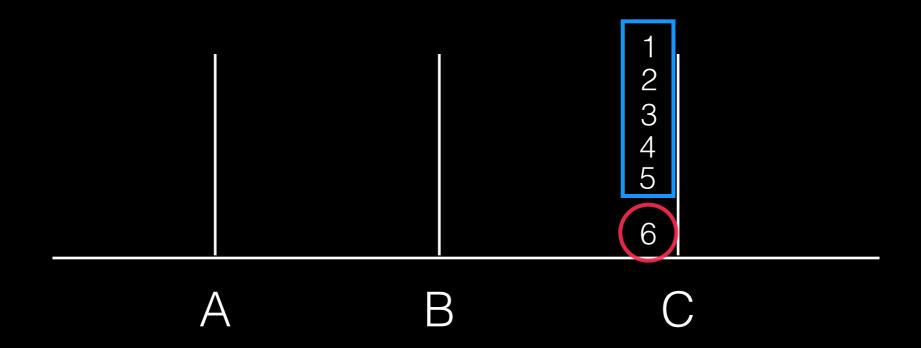

把1個碟子從B放到C n = 6

接著: 把上面的碟子,從柱子A放到柱子C

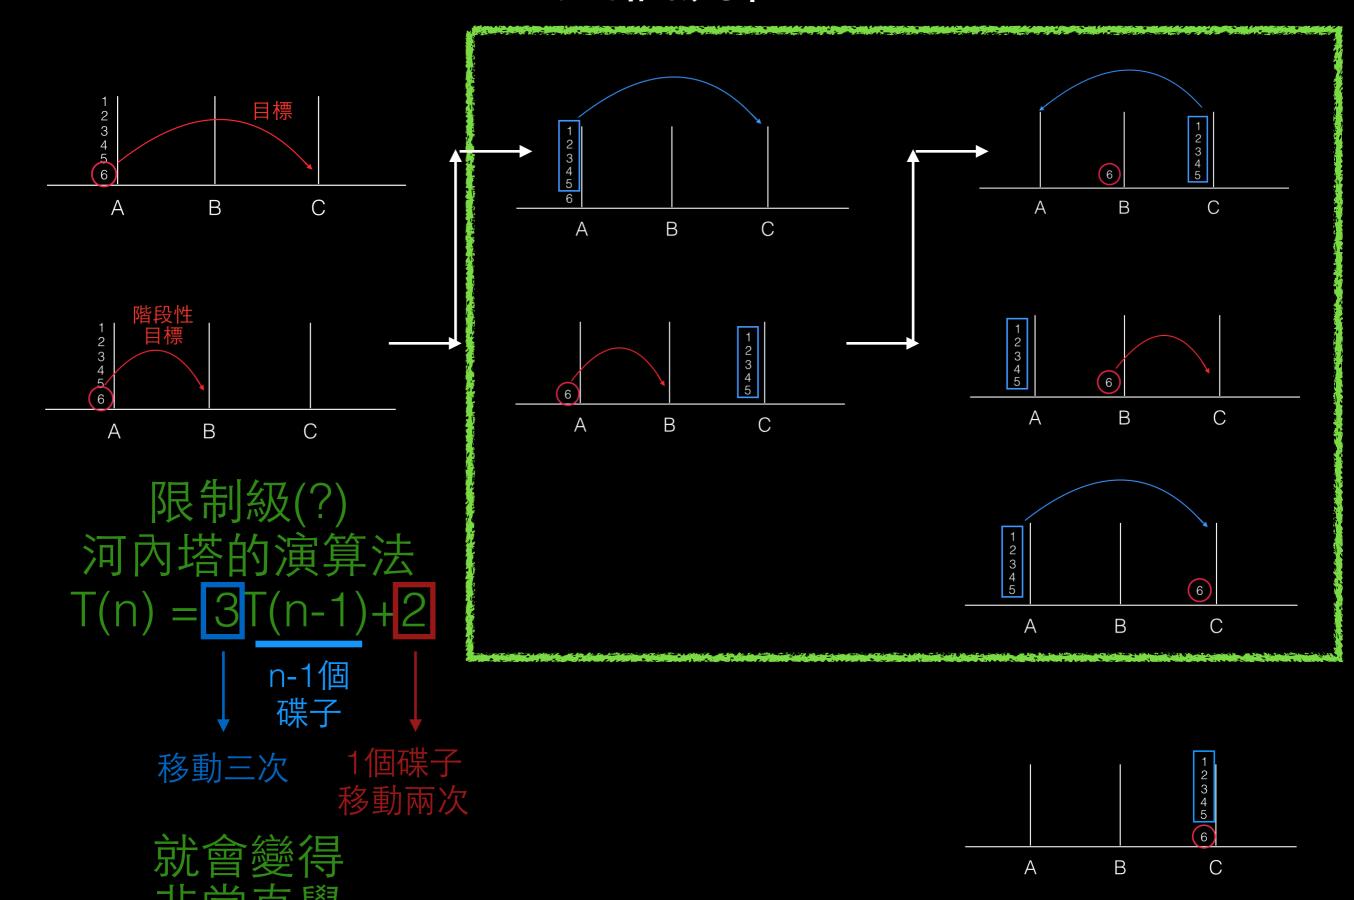

把n-1個碟子從A放到C n = 6

完成

$$n = 6$$

整個流程

程式碼

demo
